WILDFIRE ENERGY

Install Your Own Personalised Electric Vehicle Charging Point Before 2030!

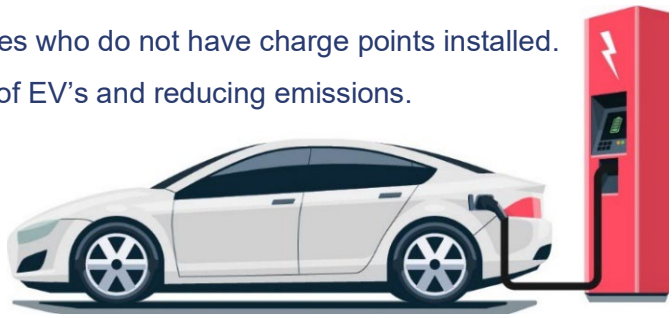

New cars and vans powered wholly by petrol and diesel will not be sold in the UK from 2030. Therefore, the number of Electric Vehicles (EV's) among your employees and customers is going to increase over the next few years and with that, the need for charge points.

Currently, the country will not be able to accommodate an influx in new EV's on the road as the charging infrastructure is not there. Create a competitive advantage for your business today by utilising our expertise and have an EV charger installed at your business, completely bespoke to your company branding!

SOME OF THE BENEFITS:

- Creates a competitive advantage over other businesses who do not have charge points installed.
- Builds your brands reputation with the early adoption of EV's and reducing emissions.
- Improve customer and employee satisfaction.
- Government grants to help with installation costs.
- Generate indirect profits to your business.

If you have any questions or would like to install EV charge points at your workplace, contact an expert today for more information:
